

Home Air Purifier - Does It Really Make A Difference?

Original and rewritten sample.

ORIGINAL

The world is not the same as before. Clean air is now a luxury more than ever with the increasing pollutants in the environment. It is difficult to control the outside environment, but cleaning your indoor air is within your control. Studies show that pollution levels indoors is much higher than outdoors as much as 2 to 10 times. Surprising, isn't it? The problem is further worsened because we are always staying indoors.

Do you need an air purifier?

You might be experiencing some allergies or other respiratory illnesses. This can be attributed to the air that you are breathing. You can make improvements by installing home air purifier.

But if your problems are more serious such as asthma, you might need another kind of air purifier that is more sophisticated. These kinds of air purifiers take away the odors and gas in the air.

Again, if its really serious chemical sensitivities, you might need some very strong air filters called HEPA filter because they can filter even cigarette smokes.

If you want to help your home air purifier, better ventilate your home once in a while. Opening your windows will let out much of the bad air and good air can come in, thereby reducing the work of your home air purifier.

How to select the best?

Selecting the best home air purifier means that you are buying one that offers many advantages to the particular needs of your family. This means that you just don't consider the price but also its suitability.

First, ask yourself what is your family's health and lifestyle. Does anyone have a serious respiratory illness? Do you have house pets? Do you smoke? These are the major considerations to think about. If you said YES to all the questions, then it is a sure thing that you have polluted indoor air. You must therefore choose the best home air purifier there is.

Second, consider the air purifiers in the market that can work for your family.

1. There are electronic air cleaners in the market that can circulate cleaner air in your room even cigarette fumes. They work to trap impurities but not necessarily kill germs or remove chemicals.

2. There are also the electrostatic purifiers which uses advanced technology to clean your home. This type of air purifier works by giving an electric charge to pollutants and eventually pulling them out of the air. This type is much complicated to install and needs a professional installer.

3. Then, there is the best filter called HEPA filter, which is highly efficient in even removing the smallest particles. It is capable of cleaning more than 99% of air pollutants. This is a good air purifier for those who have asthma problems.

Selecting the best home air purifier can be a complicated task especially if you have a limited budget. However, it is always better to invest on the most suitable home air purifier because having clean indoor air is very important for you and your family.

REWRITTEN

Nowadays, people often opt to stay at home or indoors so as to avoid air pollution. The problem is, research show that indoor pollution is 2-10 times worse than outdoor pollution. This can be attributed to cigarette smoke, frequent indoor stay, ventilation and chemical fumes, among others.

As a result, you and/or your family members might experience difficulty in breathing, allergies or other respiratory ailments such as asthma. Here comes the role of home air purifiers.

Air purifiers are design to filter indoor air. Depending on the strength of the filter, some purifiers can filter odor and clear impurities, while those with HEPA filters can screen even very small particles that can be harmful to your family's health.

How to select the one that suits you and your family?

In choosing a home air purifier, there are other things to consider aside from the price. First, it has to suit the needs of your family. A good way of analyzing is this is to consider the health condition of your family members. Does one of your family members have asthma? Are there members who are allergic to certain chemicals?

From there, you can consider the air purifiers available in the market. Again, not all of them are the same. They vary not only in price, but also in functionality.

First, there are those electric purifiers that can get rid of odors, screen impurities and circulate cleaner air in your room. However, these don't necessarily eliminate chemicals nor kill germs present in the air.

Then, there are those electrostatic purifiers which use advanced technology to clean the air. It gives off electric charges to the air, and these charges pull pollutants out. While this is an efficient system, it is also hard to install and it needs the aid of a professional installer.

Finally, there are purifiers with HEPA filters. This works best if you have a family member with asthma or allergies. It is very efficient in eliminating air pollutants. In fact, it gets rid of 99% of pollutants and impurities present in the air, making this an excellent choice for your home.

While selecting a home purifier can be hard on a limited budget, it would be wiser to invest on a more efficient purifier than endanger your family's health. The quality of air that your family breathes is close to being priceless, and in the long run, cleaner indoor air will save you more money by avoiding further health problems.
